Impact and Actions

Impact Expected and Action Suggested due to very heavy/extremely heavy rainfall:

- Isolated heavy to very heavy rainfall very likely over East Rajasthan, West Madhya Pradesh and Bihar on 05th September.

Impact expected:

- Breaking of tree branches, uprooting of small trees like banana, papaya, drum sticks. Strong wind and rain may damage plantation, horticulture and standing crops.
- Partial damage to vulnerable structures due to strong winds and rain.
- Minor damage to kutcha houses/walls, huts and roads due to heavy rain.
- Loose objects may fly.
- Small ships, trawlers and boats may be affected.
- Road and rail traffic may be affected due to heavy rain and squally winds.
- There could be localised landslides, mudslides, landslips, water logging, inundation and flooding over low lying areas.
- Occasional reduction in visibility due to heavy rainfall.
- Helicopter services may get affected.

Action suggested:

- People are advised to keep a watch on the weather for worsening conditions and be ready to move to safer places accordingly.
- Take safe shelters; do not take shelter under trees, as there could be lightning.
- In case of expected lightning, unplug electrical/ electronic appliances, immediately, get out of water bodies and keep away from all the objects that conduct electricity.
- Tourism and recreational activities to be regulated.
- Onshore and offshore activities to be judiciously regulated.
- Helicopter services to be regulated.

Agromet advisories for various parts of the country

Agromet advisories for likely impact of Heavy Rainfall:

In Madhya Pradesh, ensure proper drainage in soybean, maize, cotton, sugarcane and vegetable fields to prevent waterlogging. Keep drainage channels clear and remove excess water promptly from low-lying areas.

In East Rajasthan, maintain proper drainage in soybean, maize, paddy, cotton, millet and vegetable fields and promptly drain excess water from low-lying areas.

In Arunachal Pradesh, maintain proper drainage in soybean, rice, maize, finger millet, chilli and other standing crops to prevent waterlogging. Harvest mature soybean and banana wherever field conditions permit and store the produce safely. Maintain good aeration in rice and remove decaying plant parts from soybean.

In Assam and Meghalaya, maintain effective drainage in rice, pigeon pea, sugarcane, soybean, jute and vegetable fields and keep field channels clear. Drain excess water from already sown sesame, green gram and black gram and undertake sowing only when soil conditions become workable. In Meghalaya, ensure drainage in maize, rice and vegetable fields and provide support to banana, papaya and cucurbits; harvest mature maize and dry it promptly.

In Nagaland, Manipur, Mizoram and Tripura, maintain proper drainage in rice, soybean, groundnut, black gram, ginger and vegetable fields to prevent water stagnation. Strengthen terrace bunds and drainage channels in rice fields and ensure strict drainage in ginger. Harvest mature crops during suitable weather and avoid field operations while the soil remains excessively wet.

(Service to the nation since 1875)

In Sub-Himalayan West Bengal and Sikkim, maintain proper drainage in rice, vegetable fields and orchards to prevent water stagnation. Keep appropriate water levels in rice fields, protect jute fibre during retting from rain, and provide support to brinjal and okra to prevent lodging.

In Gangetic West Bengal, maintain proper drainage in transplanted Aman rice fields and vegetable nurseries and keep drainage channels clear. Harvest mature jute wherever conditions permit and maintain drainage before sowing mung and kalai, which are highly susceptible to waterlogging.

In Bihar, maintain proper drainage in rice and maize fields and remove excess water from low-lying areas. Monitor rice for bacterial leaf blight under humid conditions and undertake weeding and other field operations only when soil conditions permit. Harvest mature makhana wherever ready.

In Punjab, maintain proper drainage in maize and other standing crop fields and remove excess water from crop fields and orchards. Avoid allowing water to stagnate in maize and adjust vegetable sowing/transplanting and chemical applications according to field conditions. Provide support to sugarcane to minimise lodging.

In Haryana, maintain proper drainage in standing crop fields and promptly remove excess water from cotton fields. Withhold irrigation in cotton and paddy where adequate rainfall has been received and harvest mature vegetables during suitable weather conditions.

In West Uttar Pradesh, maintain proper drainage in pigeon pea, pulse, oilseed, turmeric, ginger and vegetable fields, particularly in low-lying areas. Drain excess water from standing crops and postpone sowing, fertilizer application and plant-protection operations in saturated fields until suitable soil conditions prevail.

In Tamil Nadu, provide support to banana, papaya and moringa and undertake propping in sugarcane to minimise lodging. Continue maize sowing and tomato transplanting only where field conditions permit, preferably using ridge-and-furrow systems for effective drainage.

In Kerala, maintain proper drainage in paddy, banana and vegetable fields, particularly in low-lying areas, to prevent waterlogging. Ensure proper drainage around arecanut and other plantation crops and avoid fertilizer and plant-protection applications during rainy spells.

Agromet advisories for likely impact of Thunderstorm / Gusty Winds

Shift the harvested produce in safer places or cover the produce with tarpaulin sheets in the fields. Tie the harvested crops securely and cover them to minimize the risk of displacement from strong surface winds.

Provide mechanical support to horticultural crops and staking or support to vegetables and young fruit plants / fruit-bearing plants to avoid lodging due to strong winds.

Livestock / Poultry / Fisheries

Keep the animals inside the shed during heavy rainfall and provide them balanced feed.

When maximum temperature of a station reaches $\geq 40^{\circ}\text{C}$ for plains and $\geq 30^{\circ}\text{C}$ for hilly regions
(a) Based on Departure from normal

Heat Wave: Maximum Temperature Departure from normal 4.5°C to 6.4°C .
Severe Heat Wave: Maximum Temperature Departure from normal $\geq 6.5^{\circ}\text{C}$

(b). Based on Actual maximum temperature

Heat Wave: When actual maximum temperature $\geq 45^{\circ}\text{C}$.
Severe Heat Wave: When actual maximum temperature $\geq 47^{\circ}\text{C}$

(c). Criteria for heat wave for coastal stations

When maximum temperature departure is $> 4.5^{\circ}\text{C}$ from normal. Heat Wave may be described provided maximum temperature $\geq 37^{\circ}\text{C}$

When maximum temperature remains 40°C

Warm Night: When minimum temperature departure 4.5°C to 6.4°C .
Severe Warm Night: When minimum temperature departure $> 6.4^{\circ}\text{C}$.

When minimum temperature of a station $\leq 10^{\circ}\text{C}$ for plains and $\leq 0^{\circ}\text{C}$ for hilly regions.

(a). Based on departure

Cold Wave: Minimum Temperature Departure from normal -4.5°C to -6.4°C .
Severe Cold Wave: Minimum Temperature Departure from normal $\leq -6.5^{\circ}\text{C}$
