- Minor damage to kutcha roads.
- Possibilities of damage to vulnerable structure.
- Localized Landslides/Mudslides/landslips/mudslips/landsinks/mudsinks.
- Damage to horticulture and standing crops in some areas due to inundation.
- It may lead to riverine flooding in some river catchments (for riverine flooding please visit Web page of CWC)

Action Suggested

Agromet advisories for various parts of the country

Agromet advisories for likely impact of Heavy Rainfall

- In **Jammu & Kashmir**, make arrangements to drain out excess rainwater from rice nursery and fields of maize and green gram.
- In **Bihar**, postpone irrigation in standing crops and apply fertilizers and pesticides only when the sky is clear. Ensure proper drainage in crop fields prone to waterlogging to prevent crop damage due to excess rainfall.
- In **West Bengal**, maintain proper drainage in rice and finger millet nurseries as well as ginger, tomato, brinjal, Dalley khorsani and other vegetable fields to prevent waterlogging. Drain out excess water from the crop fields. Harvest all the matured crops and vegetables. Harvest mature tea leaves and vegetables during rain. Inspect and strengthen bunds around rice nurseries to prevent flooding and maintain adequate drainage.
- In **Uttarakhand**, delay sowing of groundnut, soybean and maize till the weather improves. Maintain proper drainage channels in already sown fields of groundnut, soybean, maize, tomato and chilli.
- In **Punjab**, make arrangements for removal of excess water from cotton and maize fields.
- In **Haryana**, drain out the standing water from cotton fields immediate after excess rain.
- In **Himachal Pradesh**, prioritize good drainage in crop fields of cucurbits, tomato, capsicum and maize fields to avoid waterlogging.
- In **Arunachal Pradesh**, Drain out excess water from crops (rice, maize, soybean, finger millet). Where large gaps have formed due to crop loss, carry out gap filling where feasible; otherwise, plan suitable short-duration contingency crops after the rains subside.
- In **Assam**, Ensure proper drainage to drain out excess rain water from the fields of sugarcane, soybean, pigeon pea, jute & sesame and fruit orchards.
- In **Meghalaya**, Ensure proper drainage field channels around the rice nursery beds and field of maize, cow pea, okra and ginger crop. Strengthen nursery bunds to prevent runoff and seedling washout.
- In **Uttar Pradesh**, ensure proper drainage in fields of rice, maize, sesame and vegetables.
- In the regions expecting heavy rainfall, including **Chattisgarh and Odisha** withhold irrigation in standing crops, make necessary arrangements to remove excess rain water from the crop fields.
- **Agromet advisories for likely impact of High temperatures/ Heat Waves**

- In **Coastal Andhra Pradesh**, provide light irrigation to maintain adequate moisture in standing crops
- **Agromet advisories for likely impact of Thunderstorm / Gusty Winds**
- Shift the harvested produce in safer places or cover the produce with tarpaulin sheets in the fields. Tie the harvested crops securely and cover them to minimize the risk of displacement from strong surface winds.
- Provide mechanical support to horticultural crops and staking or support to vegetables and young fruit plants / fruit-bearing plants to avoid lodging due to strong winds.

Livestock / Poultry / Fisheries

- Keep the animals inside the shed during heavy rainfall and provide them balanced feed.
- Store the feed and fodder in a safe place to prevent spoilage.
- In regions with high temperatures and heat wave conditions, provide clean, cool drinking water to animals, and cover the roofs of poultry sheds with grass to reduce the adverse effects of heat.
- Construct an outlet with proper netting around the ponds to drain excess water, thereby preventing fish from escaping in the event of overflow.

When maximum temperature of a station reaches $\geq 40^{\circ}\text{C}$ for plains and $\geq 30^{\circ}\text{C}$ for hilly regions
(a) Based on Departure from normal

Heat Wave: Maximum Temperature Departure from normal 4.5°C to 6.4°C .
Severe Heat Wave: Maximum Temperature Departure from normal $\geq 6.5^{\circ}\text{C}$

(b). Based on Actual maximum temperature

Heat Wave: When actual maximum temperature $\geq 45^{\circ}\text{C}$.
Severe Heat Wave: When actual maximum temperature $\geq 47^{\circ}\text{C}$

(c). Criteria for heat wave for coastal stations

When maximum temperature departure is $> 4.5^{\circ}\text{C}$ from normal. Heat Wave may be described provided maximum temperature $\geq 37^{\circ}\text{C}$

When maximum temperature remains 40°C

Warm Night: When minimum temperature departure 4.5°C to 6.4°C .
Severe Warm Night: When minimum temperature departure $> 6.4^{\circ}\text{C}$.

When minimum temperature of a station $\leq 10^{\circ}\text{C}$ for plains and $\leq 0^{\circ}\text{C}$ for hilly regions.

(a). Based on departure

Cold Wave: Minimum Temperature Departure from normal -4.5°C to -6.4°C .
Severe Cold Wave: Minimum Temperature Departure from normal $\leq -6.5^{\circ}\text{C}$

(b) Based on actual Minimum Temperature (for Plains only)

Cold Wave: When Minimum Temperature is $\leq 4.0^{\circ}\text{C}$
Severe Cold Wave: When Minimum Temperature is $\leq 2.0^{\circ}\text{C}$

(c) For Coastal Stations

When Minimum Temperature departure is $\leq -4.5^{\circ}\text{C}$ & actual Minimum Temperature is $\leq 15^{\circ}\text{C}$

When minimum temperature of a station $\leq 10^{\circ}\text{C}$ for plains and $\leq 0^{\circ}\text{C}$ for hilly regions
Based on departure

Cold Day: Maximum Temperature Departure from normal -4.5°C to -6.4°C .
Severe Cold Day: Maximum Temperature Departure from normal $\leq -6.5^{\circ}\text{C}$

Phenomenon of small droplets suspended in air and the horizontal visibility $< 1\text{km}$

Moderate Fog: When the visibility between 500-200 metres
Dense Fog: when the visibility between 50-200 metres
Very Dense Fog: when the visibility < 50 metres

Sudden electrical discharges manifested by a flash of light (Lightning) and a sharp rumbling sound (thunder)

An ensemble of particles of dust or sand energetically lifted to great heights by a strong and turbulent wind.

Ice deposits on ground
