Agromet advisories for various parts of the country

Agromet advisories for likely impact of Heavy Rainfall:

In **Gangetic West Bengal**, ensure immediate drainage of excess water from rice, jute and vegetable fields, particularly in low-lying and water-accumulation areas. Strengthen bunds around rice nurseries, keep drainage channels clear and harvest mature crops, tea leaves and vegetables during rain-free intervals, storing the produce in safe, dry places.

In **Sub-Himalayan West Bengal**, maintain proper drainage in rice and finger millet nurseries, ginger, tomato, brinjal, chilli and other vegetable fields to prevent prolonged waterlogging. Keep field channels clear, harvest mature crops and vegetables during dry intervals and strengthen vulnerable crop structures where required.

In **East Uttar Pradesh**, ensure proper drainage in rice, maize, sesame, pigeon pea and other standing crops to prevent waterlogging. Postpone irrigation, intercultural operations, fertilizer and plant-protection applications until field conditions become suitable.

In **East Madhya Pradesh**, drain excess water from soybean, cotton, maize and sugarcane fields and avoid field operations while soils remain saturated. Harvest mature urad and moong promptly during suitable weather and store the produce in safe, dry places; provide support to young fruit plants and prop tall sugarcane to minimise lodging.

In **Odisha**, immediately drain excess water from rice, maize, millets, ginger, turmeric, vegetables, pulses and orchards, with priority to low-lying and waterlogged fields. Keep field drains and outlets clear, protect vegetable nurseries, maintain functional field bunds and provide staking/support to vegetables and newly planted banana to minimise lodging and crop damage.

In **Chhattisgarh**, maintain continuous and effective drainage in rice, maize, groundnut, minor millets, pulses and vegetables. Keep drainage channels clear, particularly in low-lying maize, ginger and turmeric fields, remove stagnant water promptly and provide staking/support to vulnerable vegetable crops.

In **Uttarakhand**, maintain effective drainage in sugarcane, maize and other standing crops and keep drainage channels clear. Avoid irrigation where rainfall is adequate and provide support to tall crops and vegetables to prevent lodging.

In **Jharkhand**, maintain effective drainage in maize, pigeon pea, vegetables and other standing crop fields and keep drainage channels clear to prevent prolonged water stagnation. Protect vegetable seedlings and shift harvested produce to safe, dry places.

In **West Uttar Pradesh**, ensure proper drainage in standing crop fields and vegetables to prevent waterlogging. Postpone irrigation, intercultural operations, fertilizer and plant-protection applications during wet conditions and provide staking/support to young plants, vegetables and horticultural crops.

In **West Madhya Pradesh**, ensure proper drainage in soybean, cotton, maize and sugarcane fields and avoid unnecessary irrigation or field operations under saturated conditions. Provide support to vulnerable plants and undertake propping in tall sugarcane to minimise lodging.

In **Bihar**, maintain continuous drainage in rice, maize, pigeon pea, low-lying sugarcane and other standing crop fields to prevent water stagnation. Postpone irrigation, fertilizer, pesticide and other field operations until soil conditions become suitable.

In **Karnataka**, maintain effective drainage in standing crop fields and postpone intercultural, fertilizer and plant-protection operations during wet conditions. Harvest mature green gram, black gram and soybean wherever conditions permit, shift the produce to safe covered storage and provide staking/propping support to vulnerable crops.

In **Telangana**, ensure adequate drainage in rice, cotton, green gram, black gram, red gram, vegetables and orchards to prevent water stagnation. Provide staking/support to vulnerable crops, keep harvested produce in safe, dry places and postpone fertilizer and plant-protection operations until weather and field conditions become suitable.

In **Assam and Meghalaya**, maintain effective drainage in rice, sesame, ginger, green gram, black gram and other crops, keeping field channels open to prevent waterlogging. Harvest mature jute, banana and bottle gourd during suitable dry intervals and keep harvested produce safe and dry

In **Kerala**, ensure effective drainage in banana, black pepper, coconut, ginger and turmeric fields following the recent rainfall and provide strong support to banana plants and trellis-grown crops. Postpone all field operations until rainfall ceases and soil conditions become suitable.

Agromet advisories for likely impact of Thunderstorm / Gusty Winds

Shift the harvested produce in safer places or cover the produce with tarpaulin sheets in the fields. Tie the harvested crops securely and cover them to minimize the risk of displacement from strong surface winds.

Provide mechanical support to horticultural crops and staking or support to vegetables and young fruit plants / fruit-bearing plants to avoid lodging due to strong winds.

Agromet advisory for likely impact of heavy rainfall on Livestock / Poultry / Fisheries

Keep the animals inside the shed during heavy rainfall and provide them balanced feed.

Store the feed and fodder in a safe place to prevent spoilage.

Construct an outlet with proper netting around the ponds to drain excess water, thereby preventing fish from escaping in the event of overflow.
